

CalcularRFC - SEO Audit Report

Project: rfc-generator-mexico | Date: 2026-07-01 | Mode: READ-ONLY CODEBASE AUDIT

Indexable routes: /, /consultar-rfc, /rfc-con-homoclave, /sobre-nosotros, /contacto

Executive Summary

Total checklist items evaluated: 87

PASSING: 46 (53%)

FAILING: 41 (47%)

Critical: sitewide canonical points to /; meta descriptions under 140 chars; titles exceed 60 chars with template.

PASSING (46)

- [A1] Title contains primary keyword — app/page.tsx, app/consultar-rfc/page.tsx, app/rfc-con-homoclave/page.tsx
- [A3] Unique title tags per indexable page — each page.tsx exports distinct metadata.title
- [A5] Unique meta descriptions — distinct per page in metadata exports
- [A6] Keyword variation in meta descriptions — RFC/calculadora/consultar referenced in descriptions
- [B1] One H1 per page — components/Hero.tsx, ToolPageHero.tsx, app/contacto/page.tsx, app/sobre-nosotros/page.tsx
- [B2] H1 topically aligned but different from title — e.g. home title vs Hero h1 wording differs
- [B3] H2 covers subtopics — components/HomeContentSection.tsx h2 per section; tool content sections
- [B5] Primary keyword in H2 — e.g. Calculadora RFC, Consultar RFC, RFC con Homoclave section titles
- [B6] Logical heading hierarchy — h2 sections with nested h3 in HomeContent.tsx / ConsultarRfcContent.tsx
- [C1] Keyword-rich clean URLs — /consultar-rfc, /rfc-con-homoclave
- [C2] Lowercase hyphenated URLs — lib/routes.ts Spanish slugs
- [C3] Short URL slugs — 2-4 words, no stop words in tool paths
- [C4] Consistent URL pattern — Spanish slugs across content/tool pages
- [C5] No dynamic indexable URLs — static app router pages only; app/sitemap.ts
- [D1] Primary keyword in first 100 words — Hero lead + first HomeContentSection mention RFC/calcular
- [D3] Semantic/LSI keywords — SAT, homoclave, CURP, CFDI, persona fisica across content components
- [D4] Content matches search intent — calculator + educational guide structure on tool pages
- [D7] FAQ sections — components/Faq.tsx, ConsultarRfcFaq.tsx, RfcConHomoclaveFaq.tsx + lib/*Faq*.ts
- [D10] Bold highlights answer phrases — strong tags in HomeContent.tsx, ConsultarRfcContent.tsx
- [E3] Descriptive ALT on images — ContentImage.tsx, HeroBackground.tsx, imageAlt props sitewide
- [E4] ALT not keyword-stuffed — natural Spanish alt strings in page components
- [E5] Descriptive image filenames — public/images/**/*.*.webp (e.g. que-es-calculadora-rfc.webp)
- [E6] Lazy loading below-fold — ContentImage default priority=false; HeroBackground eager only when priority
- [F1] Internal links to all indexable pages — components/Header.tsx, Footer.tsx, sitemap
- [F2] Calculator on homepage — components/Hero.tsx embeds RfcGeneratorCard
- [F3] Internal links early in content — HomeContent section 1 links ROUTES.rfcConHomoclave; HashLink in tool content
- [F4] Descriptive anchor text — RFC con homoclave, calcular RFC, Consultar RFC (not click here)
- [F6] Topic cluster interlinking — home, consultar-rfc, rfc-con-homoclave via nav + in-content links
- [F8] No redirect chains — next.config.ts has no redirects
- [F9] Link count under 150 per page — static marketing site; no excessive link blocks

[G1] FAQ schema on FAQ pages — `faqPageJsonLd` in `app/page.tsx`, `consultar-rfc`, `rfc-con-homoclave`

[G3] WebApplication schema on tool pages — `webApplicationJsonLd` in `home` + `tool page.tsx` files

[G7] No conflicting duplicate schema types — distinct `@type` per JSON-LD block

[H4] No duplicate meta titles/descriptions — unique metadata per route

[I2] About page exists — `app/sobre-nosotros/page.tsx`

[I3] Privacy + Terms live and footer-linked — Footer `legalLinks`

[I6] Contact with real email — `app/contacto/page.tsx` `icalcularrfc.mx@gmail.com` + `ContactForm`

[J3] Clear contrasting CTAs — `PrimaryLink/PrimaryButton` gradient styles

[J4] Max 3 clicks from home — flat header nav (1 click to all main pages)

[J5] Scannable lists — `ul/ol` throughout `HomeContent`, `ConsultarRfcContent`

[J7] Multimedia illustrations — section images + hero backgrounds per page

[K2] What is topic section — `Que Es La Calculadora RFC / Que Es Un RFC Con Homoclave`

[K3] FAQ natural question phrasing — `lib/faqContent.ts`, `consultarRfcFaq.ts`, `rfcConHomoclaveFaq.ts`

[K4] HowTo / step content — `home Como Funciona` section; `ConsultarRfcContent` procedural sections

[K7] Tabular comparison data — tables in `ConsultarRfcContent.tsx` (RFC vs CURP vs NSS)

[K12] Brand + tool name pairing — `CalcularRFC` + `calculadora RFC` used consistently

FAILING (41)

[A1] Title primary keyword at start — `app/contacto/page.tsx`, `app/sobre-nosotros/page.tsx` lack RFC keyword

[A2] Title length 50-60 chars — With template `%s | CalcularRFC`, tool titles render ~67-74 chars (`app/layout.tsx`)

[A4] Meta description 140-160 chars — All indexable pages short: `home` 132, `consultar` 131, `homoclave` 122, `contacto` 103, `sobre` 138

[B1] H1 contains primary keyword — `Contacto/Sobre Nosotros` H1s are generic, no RFC keyword

[B4] H3-H6 for nested detail only — `components/Footer.tsx` uses `h3` for `Explorar/Legal` nav labels (decorative)

[D2] Keyword density 1-2% — Not measurable/controlled in codebase

[D5] Word count vs SERP average — No SERP benchmark in repo

[D6] Original non-filler content — Awkward phrasing/grammar in multiple sections

[D8] Answer-first under each H2 — Many sections open with context, not a direct answer sentence

[D9] Content date-stamped when refreshed — No visible last-updated date on indexable pages

[E1] All images WEBP — `public/logo.svg`, `public/og-image.svg` are SVG not WEBP

[E2] Images under 100KB — `public/images/home/quien-puede-usar-rfc.webp` is 111.7 KB

[E7] OG image optimized 1200x630 — `public/og-image.svg` is SVG with embedded text, not compressed raster

[E8] No text baked into images — `og-image.svg` contains text (RFC Generator Mexico)

[F5] Exact-match anchor overuse risk — Repeated `calcular RFC` anchors across cluster pages

[F7] No broken internal links — Footer social links use `href=#` placeholders (`components/Footer.tsx`)

[F10] Related tool links at bottom — No related-tools block on `consultar-rfc` or `rfc-con-homoclave` bottoms

[G2] Breadcrumb schema sitewide — Not on all indexable routes uniformly

[G4] Organization schema w/ social profiles — `organizationJsonLd` sameAs: [] empty (`lib/jsonLd.ts`)

[G5] Article schema on supporting content — Supporting pages use `WebPage` only, not `Article`

[G6] Video schema — No embedded video content sitewide

[G8] Schema validated (Rich Results) — No validation artifacts in codebase

[H1] Self-referencing canonical per page — `app/layout.tsx` sets `alternates.canonical`: / globally; children do not override

- [H5] Thin pages — app/contacto/page.tsx may be borderline thin vs 300-word guideline
- [I1] Author attribution on all content pages — Author only on sobre-nosotros/autor; missing on home/tool pages
- [I4] External citations to authoritative sources — SAT mostly plain text; one official SAT href in ConsultarRfcTool.tsx
- [I5] Statistics freshness — FAQ cites 2022 rule without page-level freshness signals
- [J1] Table of contents for long pages — No TOC on home/consultar long-form pages
- [J2] Tool above the fold — consultar-rfc places ConsultarRfcTool below ConsultarRfcHero
- [J6] CLS = 0 on tool results — Client-side AnimatePresence/motion result panels; no CLS guard
- [J8] Social sharing on pillar pages — RfcShareActions only on calculator results, not page-level sharing
- [K1] 40-60 word direct answer at top — Hero leads are promotional, not definitional answers
- [K5] Speakable schema — Not implemented in lib/jsonLd.ts
- [K6] Self-contained H2 sections — Several sections depend on prior context
- [K8] Key Takeaways summary box — No dedicated takeaways component near page tops
- [K9] Tool output explanatory sentence — compact RfcGeneratorCard omits SAT disclaimer
- [K10] Citation-friendly phrasing — Limited formal SAT citations in body copy
- [K11] Wikipedia/Wikidata/authoritative directories — Organization sameAs empty
- [K13] Avoid hedging language — Site uses estimacion disclaimers (conflicts with strict no-hedging rule)
- [K14] AI citation testing — No evidence of ChatGPT/Gemini/Perplexity testing
- [K15] Indexable crawlable static tool results — RFC results rendered client-side after form submit

Score by Category

A Title & Meta: 3/6 pass

B Headings: 5/6 pass

C URLs: 5/5 pass

D Content: 5/10 pass

E Images: 4/8 pass

F Internal Links: 7/10 pass

G Schema: 3/8 pass

H Canonical: 1/5 pass

I E-E-A-T: 3/6 pass

J UX: 4/8 pass

K AEO/GEO: 5/15 pass
